

I.P.A Banned Substance List

The I.P.A. was established with a separate drug tested division. The Amateur division is a strict drug tested division. Testing is done by Quest Diagnostics by urinalysis. Lifters in the Amateur division will be tested by urinalysis for the presence of prohibited anabolic steroids. The Amateur Division lifters are tested randomly at no charge to the lifter unless the results are found positive. Any lifter who enters the Amateur Division and totals a Professional Total will be drug tested.

Below is a list of *anabolic steroids* screened for by Quest Diagnostics.

Bolasterone	Methandriol
Boldenome (Equipoise)	Methenolone (Primobolan)
4-Chlorotestosterone(Clostebol)	Methyltestosterone
Clenbuterol (Siropent)	Mibolerone
Danazol	Nandrolone (Deca-Durabolin)
Dihydrotestosterone (Stanolone)	Norethandrolone/Ethylestrenol
Dehydrochloromethyltestosterone (Oral Turinabol)	Oxandrolone (Anavar)
Dromostanolone (Masteron)	Oxymesterone
Epitestosterone (if above 200 ng/mL)	Oxymetholone (Anadrol)
Formebolone (Esiclone)	Stanozolol (Winstrol)
Fluoxymesterone (Halotestin)	Stenbolone
Furazabol	Testosterone (T/epiT ratio*)
Mesterolone (Proviron)	Trenbolone (Finajet, Parabolan)
Methandrostenolone (Methandienone, Dianabol)	. . . <i>and other related compounds</i>
	Probenecid (masking agent)

*specimen is considered positive when Testosterone/Epitestosterone ratio is greater than six (6).
